Providing students with seats in needed classes is a top

campus priority. We are deeply appreciative of the hard work of college enrollment managers in the difficult task of delivering needed classes in this time of resource limitations.

Enrollment planning targets are forecasts of enrollment and are intended to assist colleges in anticipating enrollment changes in order to plan schedules that provide needed sections for students.

College enrollment targets are based upon our university enrollment forecasting model that incorporates many parameters (the campus enrollment target, size of undergraduate and graduate continuing student populations, continuation rates, average unit loads, new student admission cohorts, and trends) and college average shares of prior term enrollments. Spring enrollment trends are
